External Security Configuration Assessment

Sample Merchant KZ

Security Snapshot

Generated: 2026-10-01 00:02 UTC · Report: bfae4767-df1f-5497-94b9-5a4ad0f02617

Policy: starter-risk-1 · assessment-2

Limited external configuration assessment

This is a limited external configuration assessment, not a penetration test, compliance audit or guarantee of safety. Missing, failed or stale checks do not prove security. Human task completion is not technical resolution.

Executive summary

Saved evidence is available for 1 of 1 enrolled domains. Assessment status: Ready. Findings below describe only the observed scope.

Coverage and recorded findings	Count
Currently authorized domains	0
Unverified or expired domains	1
Domains with usable saved evidence	1
Domains without usable evidence	0
Domains with stale evidence	0
Historical findings excluded from assessed scope	0

Open / High: 1 · Open / Medium: 2

Top priorities

No.	Risk level / domain	Recorded issue
1	High merchant.example	Certificate renewal was due within 7 days TLS_CERTIFICATE_ACTION
2	Medium merchant.example	Multiple SPF policies were observed DNS_SPF_MULTIPLE
3	Medium merchant.example	Review a basic DMARC policy format problem DNS_DMARC_POLICY

Scope and method

Only authorized domain names and saved, supported observations are assessed: DNS email-record context, TLS certificate trust/renewal, and root HTTP/HTTPS responses and selected headers. Observation times differ from the report creation time. Failed, inconclusive and unrecorded checks remain gaps, not successful checks.

Excluded: internal networks, malware detection, account auditing, exploitation, port sweeping, continuous monitoring and compliance certification. Current domain proof does not establish permission for every service behind a domain.

Domain	Scope status	Last collection (UTC)
merchant.example	Synthetic scenario only; no ownership proof or network check Completed	2026-10-01 00:00 UTC

Findings and evidence

01 / Certificate renewal was due within 7 days

High · Open · merchant.example

Why this matters

Certificate problems can stop customers or staff reaching this exact website over trusted HTTPS.

Recommended next step

Ask the hosting contact to check renewal, the certificate names and full trusted chain. Install the correct certificate, then run an authorized scan again.

How to verify the change

Rerun this rule in a new authorized check. A completed task alone does not confirm resolution.

Why this priority

An explicit trust error or a measured renewal deadline supports a transport maintenance priority.

Ordering labels: urgency 2/3; observed relevance 2/2. These are not risk scores.

Last observation: 2026-10-01 00:00 UTC · Confidence: Conclusive

TLS_CERTIFICATE_ACTION · starter-risk-1 · /app/findings/08401bf3-a1c3-5431-a338-16adb991324f

Technical evidence

Check / observation time	Recorded technical values	Observation ID:
TLS_CERTIFICATE 2026-10-01 00:00 UTC pass	not_before: 1790726400 not_after: 1791244800 protocol: TLSv1.3	f09cd973-261e-5801-a0a0-18f00a75dec4

Limits of this conclusion

One exact hostname and pinned endpoint was checked. This does not enumerate every certificate, cipher or supported protocol.

02 / Multiple SPF policies were observed

Medium · Open · merchant.example

Why this matters

Multiple SPF policies at the same name can cause mail-authentication evaluation errors if this domain sends mail.

Recommended next step

Ask the mail administrator to consolidate intended senders into one SPF policy at this exact name. Do not overwrite the DNS ownership challenge. Rerun the authorized DNS check.

How to verify the change

Rerun this rule in a new authorized check. A completed task alone does not confirm resolution.

Why this priority

The persisted exact v=spf1 record count identifies multiplicity; medium priority reflects configuration correctness, not compromise.

Ordering labels: urgency 1/3; observed relevance 1/2. These are not risk scores.

Last observation: 2026-10-01 00:00 UTC · Confidence: Conclusive

DNS_SPF_MULTIPLE · starter-risk-1 · /app/findings/d32bf355-8e59-5707-a3b1-3bc4adb27c87

Technical evidence

Check / observation time	Recorded technical values	Observation ID:
DNS_SPF_PRESENT 2026-10-01 00:00 UTC Needs attention	record_count: 2	321ac53b-5c68-571e-bdee-db33c8b8d451

Limits of this conclusion

Outbound email use and SPF mechanisms/includes are unknown. One record or no record is not proof that outbound email is correctly authorized.

03 / Review a basic DMARC policy format problem

Medium · Open · merchant.example

Why this matters

The saved basic DMARC observation warrants a mail-policy review; it does not establish email compromise.

Recommended next step

Ask the mail administrator to confirm whether this exact domain sends mail, review DMARC syntax and alignment, and stage enforcement after monitoring legitimate senders. Rerun the authorized DNS check.

How to verify the change

Rerun this rule in a new authorized check. A completed task alone does not confirm resolution.

Why this priority

Missing or monitor-only policy with inbound-mail context is low priority. A single basic malformed policy is medium priority for configuration review.

Ordering labels: urgency 1/3; observed relevance 1/2. These are not risk scores.

Last observation: 2026-10-01 00:00 UTC · Confidence: Contextual

DNS_DMARC_POLICY · starter-risk-1 · /app/findings/a24d209f-4525-5061-9faa-578b8e307c09

Technical evidence

Check / observation time	Recorded technical values	Observation ID:
DNS_DMARC_PRESENT 2026-10-01 00:00 UTC Needs attention	policy: malformed record_count: 1	fe0db278-4018-547 b-afbd-8a83c3938b2 2

Limits of this conclusion

MX suggests inbound handling only. Outbound email, alignment, reporting and full DMARC syntax were not assessed; p=none can be intentional.

Remediation work

Human task status does not determine finding resolution.

Task status	Count
Done	1
In progress	1
To do	1

Certificate renewal was due within 7 days

merchant.example · Task status: To do · Finding status: Open

Owner label: Sample IT contact

Ask the hosting contact to check renewal, the certificate names and full trusted chain. Install the correct certificate, then run an authorized scan again.

Updated: 2026-10-01 00:01 UTC · /app/tasks/6e12c76a-13b3-53b5-b8de-d6cc4fe20e5c

Multiple SPF policies were observed

merchant.example · Task status: In progress · Finding status: Open

Owner label: Sample IT contact

Ask the mail administrator to consolidate intended senders into one SPF policy at this exact name. Do not overwrite the DNS ownership challenge. Rerun the authorized DNS check.

Updated: 2026-10-01 00:01 UTC · /app/tasks/f7116199-7d7b-5099-b20e-69a5a2774233

Review a basic DMARC policy format problem

merchant.example · Task status: Done · Finding status: Open

Owner label: Sample IT contact

Ask the mail administrator to confirm whether this exact domain sends mail, review DMARC syntax and alignment, and stage enforcement after monitoring legitimate senders. Rerun the authorized DNS check.

Updated: 2026-10-01 00:01 UTC · /app/tasks/fab71d09-0ec8-5e51-b14a-da9103378486

Task marked done - remediation not yet verified

Reading this assessment

A finding is a supported configuration condition, not necessarily an exploitable vulnerability. Severity and priority come from the recorded policy; no CVSS score or CVE is invented. Inconclusive means evidence was insufficient. Stale means the observation may no longer describe the current configuration. Only a later comparable check confirms resolution.

This is a limited external configuration assessment, not a penetration test, compliance audit or guarantee of safety. Missing, failed or stale checks do not prove security. Human task completion is not technical resolution.

Appendix: saved check inventory

Protocol identifiers, evidence values and source references below are preserved exactly. Empty values are not a claim of safety. References identify records inside the authenticated workspace; they grant no public access.
