SAMPLE DATA / DEMO - NOT A LIVE ASSESSMENT

# Security Snapshot

## Sample Merchant KZ

Generated at: 2026-10-01 00:02 UTC

Report ID: bfae4767-df1f-5497-94b9-5a4ad0f02617

Policy: starter-risk-1

Limited external configuration assessment

This is a limited external configuration assessment, not a penetration test, compliance audit or guarantee of safety. Missing, failed or stale checks do not prove security. Human task completion is not technical resolution.

## Scope

| | |
|---|---|
| Enrolled domains | 1 |
| Currently authorized domains | 0 |
| Unverified or expired domains | 1 |
| Domains with stale evidence | 0 |
| Domains with usable saved evidence | 1 |
| Domains without usable evidence | 0 |
| Historical findings excluded from assessed scope | 0 |

ready

## Finding and work summary

open · high: 1

open · medium: 2

Task status · done: 1

Task status · in_progress: 1

Task status · todo: 1

## Top priorities

## 1. Certificate renewal was due within 7 days

merchant.example · high · open

Why this matters: Certificate problems can stop customers or staff reaching this exact website over trusted HTTPS.

Recommended next step: Ask the hosting contact to check renewal, the certificate names and full trusted chain. Install the correct certificate, then run an authorized scan again.

An explicit trust error or a measured renewal deadline supports a transport maintenance priority.

Observed at: 2026-10-01 00:00 UTC · TLS_CERTIFICATE_ACTION

## 2. Multiple SPF policies were observed

merchant.example · medium · open

Why this matters: Multiple SPF policies at the same name can cause mail-authentication evaluation errors if this domain sends mail.

Recommended next step: Ask the mail administrator to consolidate intended senders into one SPF policy at this exact name. Do not overwrite the DNS ownership challenge. Rerun the authorized DNS check.

The persisted exact v=spf1 record count identifies multiplicity; medium priority reflects configuration correctness, not compromise.

Observed at: 2026-10-01 00:00 UTC · DNS_SPF_MULTIPLE

## 3. Review a basic DMARC policy format problem

merchant.example · medium · open

Why this matters: The saved basic DMARC observation warrants a mail-policy review; it does not establish email compromise.

Recommended next step: Ask the mail administrator to confirm whether this exact domain sends mail, review DMARC syntax and alignment, and stage enforcement after monitoring legitimate senders. Rerun the authorized DNS check.

Missing or monitor-only policy with inbound-mail context is low priority. A single basic malformed policy is medium priority for configuration review.

Observed at: 2026-10-01 00:00 UTC · DNS_DMARC_POLICY

## Findings and evidence

## Certificate renewal was due within 7 days

merchant.example · open · high

Certificate problems can stop customers or staff reaching this exact website over trusted HTTPS.

Ask the hosting contact to check renewal, the certificate names and full trusted chain. Install the correct certificate, then run an authorized scan again.

One exact hostname and pinned endpoint was checked. This does not enumerate every certificate, cipher or supported protocol.

## Multiple SPF policies were observed

merchant.example · open · medium

Multiple SPF policies at the same name can cause mail-authentication evaluation errors if this domain sends mail.

Ask the mail administrator to consolidate intended senders into one SPF policy at this exact name. Do not overwrite the DNS ownership challenge. Rerun the authorized DNS check.

Outbound email use and SPF mechanisms/includes are unknown. One record or no record is not proof that outbound email is correctly authorized.

## Review a basic DMARC policy format problem

merchant.example · open · medium

The saved basic DMARC observation warrants a mail-policy review; it does not establish email compromise.

Ask the mail administrator to confirm whether this exact domain sends mail, review DMARC syntax and alignment, and stage enforcement after monitoring legitimate senders. Rerun the authorized DNS check.

MX suggests inbound handling only. Outbound email, alignment, reporting and full DMARC syntax were not assessed; p=none can be intentional.

## Remediation work

## Certificate renewal was due within 7 days

merchant.example · Task status: todo · Finding status: open

Owner label: Sample IT contact

Ask the hosting contact to check renewal, the certificate names and full trusted chain. Install the correct certificate, then run an authorized scan again.

Updated: 2026-10-01 00:01 UTC · /app/tasks/6e12c76a-13b3-53b5-b8de-d6cc4fe20e5c

## Multiple SPF policies were observed

merchant.example · Task status: in_progress · Finding status: open

Owner label: Sample IT contact

Ask the mail administrator to consolidate intended senders into one SPF policy at this exact name. Do not overwrite the DNS ownership challenge. Rerun the authorized DNS check.

Updated: 2026-10-01 00:01 UTC · /app/tasks/f7116199-7d7b-5099-b20e-69a5a2774233

## Review a basic DMARC policy format problem

merchant.example · Task status: done · Finding status: open

Owner label: Sample IT contact

Ask the mail administrator to confirm whether this exact domain sends mail, review DMARC syntax and alignment, and stage enforcement after monitoring legitimate senders. Rerun the authorized DNS check.
